

Manual creasing device BN4 maximum creasing length 470MM

Machine is designed for paper creasing. Paper and cardboard (even up to 1600g/m²) can be creased with double paralel crease. It is possible thanks to the use of a square insert on which four sides are:

- a) a small groove (for paper);
- b) a big groove (for cardboard);
- c) a section designed for fixing the exchangeable part designed for different types of paper and cardboard;
- d) adjusted split for making micro perforation to cut out, by changing creasing device into perforating device we are able to perform perforations on short lengths.

The device is equipped with a unique movable table plate. It allows for performing six different creases without resetting the machine.

You can see how the machine operates on www.estyma.eu

TECHNICAL DATA	
Creasing length	470 mm
G.S.M	up to 1600 g/m ²
Double crease	Can be performer with spacing from 1mm up to 20mm
Perforation for tearing off	Single sheets
Capacity	Up to 1000 cycles/h (depending on crease type and operator's proficiency)
Operator	1 person
Dimensions Width / Height / Length	43 cm / 43 cm / 52 cm
Weight	24 kg
